

Flowmeter

# Visu-Flo™

The Vanguard Visu-Flo System™ brings modern technology to your liquid application systems to monitor not only flow, but rate as well. All done on a 7" color touch screen! Detect runs that are over or under applying and read out in either GPA or GPM for each row.

Choose your console from the VM-4200 or VM-4400 models which give your flow in GPM, or from the VM-4600 with built in GPS to give you application rate in GPA. Either choice will provide the precise information required by today's producers.

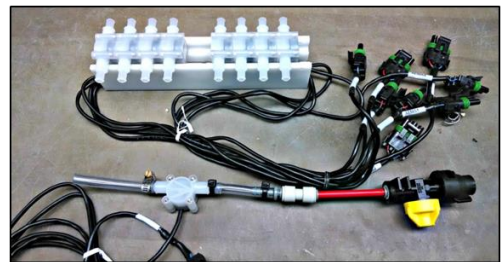

Floating balls are a thing of the past with the Vanguard Visu-Flo, and with our easy-to-install brackets and manifolds, plumbing is kept to a minimum. A wide range of flowmeter options are available for almost any application. Now available with either 3/8" Hose barb or John Guest Fittings.

All models monitor seeding rate as well liquid application and can be configured to show seed and flow simultaneously on the same screen! Competitively priced, Vanguard is your best choice in monitor technology.

With the Vanguard Visu-Flo, you can work with peace-of-mind knowing your liquid is being applied where you want it and at the rate you want.

Flowmeters w/ John Guest fittings and manifold
